

Referral for Assessment for Pulmonary Rehabilitation NHS Wakefield CCG

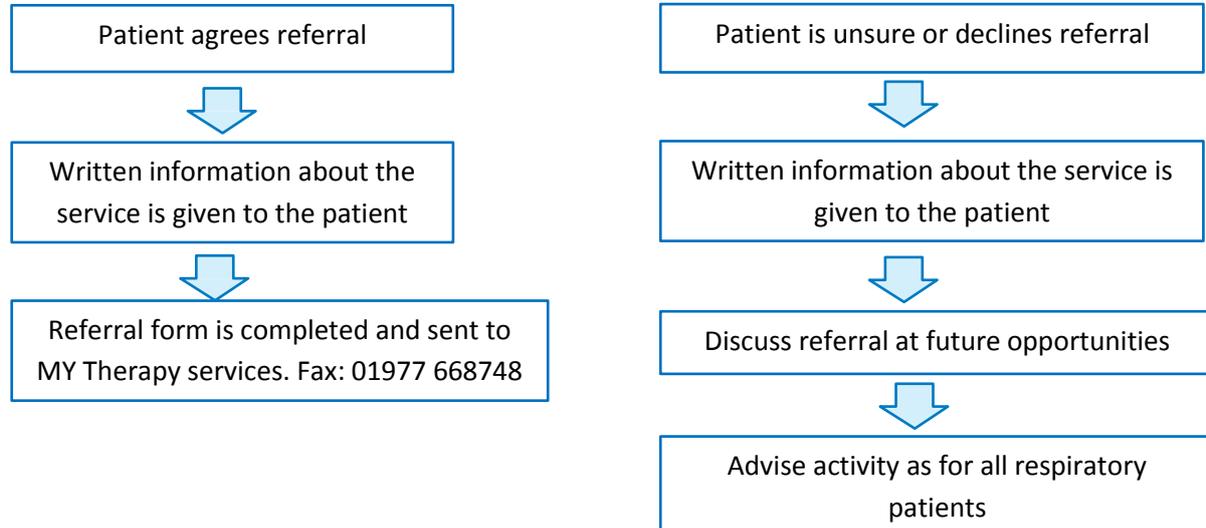

All patients with a confirmed Respiratory diagnosis

Encourage physical activity 5x a week for 30 minutes, exercise at a level of moderate breathlessness (walking, swimming or cycling)

Discuss referral to formal Pulmonary Rehabilitation Programme

All patients:

- Who consider themselves functionally disabled by breathlessness (Physical activity and at least a level of moderate breathlessness, usually people with an MRC score of 3 or more)
- With an MRC score of 2 who are symptomatic and disabled by their condition, and who require a health care professional assessment and supervision of exercise training, rather than simple advice on lifestyle changes (i.e. not universally to everyone with an MRC score of 2)
- Who have either recently had an exacerbation of COPD requiring a hospital admission or whose functional baseline has significantly altered and is not following the expected recovery path
- Patients must be motivated to attend and motivation should form part of the assessment

GENERAL ADVICE

- Prior to commencing patients on oxygen or nebulised therapies the patient must be assessed by the respiratory team via a routine referral. There is no urgency to commence patients on these therapies to manage stable illness
- The service does accept referrals for patients requiring oxygen therapy
- Patient transport is available to attend the Pulmonary Rehabilitation classes for, those patients who have difficulties using public transport, or for those who do not have access to private vehicle
- Information leaflet for patients and referral form available from CCG Intranet Skyline (include address)

FOR FURTHER DISCUSSION PLEASE CONTACT: MY Therapy office one: 01977 747471 for information/advice or Email: Alison.coe@midyorks.nhs.uk
